MEMORANDUM FOR: NEFOP observers
FROM: Amy Van Atten Branch Chief, FSB

SUBJECT: Species Identification Verification Program

It is extremely important for data quality to ensure observers are correctly identifying fish. The Northeast Fisheries Observer Program (NEFOP) requires all observers to comply with this verification process so that we can ensure data accuracy and maintain the integrity of the program.

To complete your obligations, please follow these steps:
1. Check the species list table below.
2. If the species listed has not yet been sent in for verification, send it at the first available time.
3. Store the specimen in a Ziploc bag accompanied with a waterproof tag. The tag should have your observer ID, trip number and extension, as well as the haul number and species name.
4. Record the species on your Haul Log as fish disposition code 007 ("No market, but retained by observer for science purposes").
5. Freeze the samples solid prior to shipping. Ship samples as a priority in a cooler, with coldpack, at the same time as your trip data (don’t send on Friday or over the weekend).
6. Please send in the actual fish or photographs listed below. All Fish nk’s should be photographed and sent in if possible.

The first time you encounter a species listed in the table below, you should either be saving a specimen to send in or taking pictures if appropriate. We may also notify you that you have been selected to contribute fish on certain trips.

Observers are required to send in the 30 species listed below every 3 months. This is a program requirement. Failure to satisfy this requirement will result in additional testing and possible probationary status.

Observers will be required to send in the following species on all herring trips: Atlantic Herring, Blueback Herring, Alewife, Hickory shad, and American shad.

Confirmation of species sent in will be emailed to you bi-weekly, indicating both correct and incorrect identifications. Notifications of incorrectly identified species will be sent out immediately and observers should resend fish the next time they encounter them. We appreciate your cooperation with the Species Identification Verification Program. There are many species you will come across, some may be extremely rare and we will make full use of the samples to train observers during certification classes and refresher debriefings. We understand how much work you have to do, however the program considers this an integral part of your job. If you have any questions about the program, please don’t hesitate to call Kevin Meyer at 508-495-2005, or email kmeyer@mercury.wh.whoi.edu, or Pete Canavin at 508-495-2388, or email pcanavin@mercury.wh.whoi.edu.
 please send in actual specimens or photographs of the following species.

</table>

The highlighted herring species must be sent in for every trip targeting herring.

***Bag, tag, and send in all Fish NK's along with photographs of the specimen.***
***Make sure to include something in each picture for scale.***
