

Francisco (Cisco) Werner is the Director of NOAA's Southwest Fisheries Science Center. Cisco's research has focused on the oceanic environment through numerical models of marine ecosystems in the North Atlantic and North Pacific. He has studied the effects of physical forcing on lower trophic levels and the subsequent effect on the structure, function and abundance of commercially and ecologically important species, including Atlantic menhaden and Gulf of Maine/Georges Bank cod and haddock, among others. Cisco earned his BSc in Mathematics and his PhD in Oceanography from the University of Washington. Prior to joining NOAA, he was on the faculty of the Marine Sciences Department at the University of North Carolina at Chapel Hill, where he was George & Alice Welsh Distinguished Professor, and at Rutgers University where he was Professor and Director of the Institute of Marine and Coastal Sciences. From 2002 to 2007 he served as Chairman of the GLOBEC (Global Ocean Ecosystems Dynamics) International Scientific Steering Committee.
