

Figure 6.15.2.2. Proportion of iterations when at least one two sea-winter female was present in three areas of the Penobscot River watershed: the Upper Penobscot (i.e., above West Enfield Dam), the Piscataquis (i.e., the Piscataquis River watershed), and the Lower Penobscot (i.e., below the West Enfield Dam). Values are shown for generations 1–10 for 0, 0.5, 1 (base), 2, and 4 times the base proportion of adults that return to sea after unsuccessfully passing a dam (top to bottom, respectively) under the Recovery scenario.
