

Figure 6.22.2.5. Median number (panels on the left) and median proportion (panels on the right) of smolts killed during emigration due to direct and indirect cumulative mortality associated with dam passage across the 15 modeled hydroelectric dams in generations 1–10. Medians (circles) and twenty-fifth to the seventy-fifth percentiles (lines) are shown for scenarios using median two sea-winter female marine survival rates during 1971–1990, 1991–2010, and 1971–2010 (base) (top to bottom, respectively) under the Recovery scenario.
