

3 January 2003

## CRUISE RESULTS

NOAA FRV ALBATROSS IV  
Cruise No. AL 01-10 (Parts I-IV)  
Autumn Bottom Trawl Survey

### CRUISE PERIOD AND AREA

The cruise period was from 4 September to 23 October. The survey was conducted in four parts: Part I was during 4-14 September; Part II, 17-28 September; Part III, 2-11 October; and Part IV, 15-23 October. The area of operation was from Cape Hatteras to the western Scotian Shelf including the Gulf of Maine. Station locations are shown in Figures 1 and 2.

### OBJECTIVES

The objectives of the survey were to: (1) determine the seasonal distribution and relative abundance of fish and invertebrate species found on the continental shelf; (2) collect biological samples for age determinations and growth studies, fecundity, maturity, and feeding ecology; (3) collect hydrographic and meteorological data; (4) collect samples of ichthyoplankton and zooplankton for relative abundance and distribution studies; (5) collect data and samples for cooperative researchers and programs; (6) conduct cooperative research tows with the F/V Jason & Danielle during Part II of the survey; and (7) conduct a vessel comparison with the FRV Delaware II during Part IV of the survey.

### METHODS

Operations and gear conformed with the Cruise Instructions for the autumn bottom trawl survey dated 12 July 2001 with the following exceptions: Part III departed one day later than scheduled (on 2 October) due to vessel mechanical problems; and Part IV returned to port on 23 October due to the early completion of the survey (after the FRV Delaware II returned to port due to mechanical problems).

At each pre-selected station, a 30-minute tow was made with the Northeast Fisheries Science Center (NEFSC) standardized number 36

Yankee otter trawl rigged with 41 centimeter (cm) diameter rollers, 9 meter (m) bridles, and 450 kilogram (kg) polyvalent trawl doors rigged with chain backstraps. The trawl was fished at a scope of 4:1 in water depths between 18 and 27 m; 3:1 in depths between 27 and 184 m; and 2.5:1 in depths greater than 184 m. During each tow, speed was maintained at approximately 3.5 knots, primarily determined using DGPS instrumentation and direction of each tow was generally toward the next station.

A digital data acquisition Fisheries Scientific Computer System (FSCS) was used to record the data. This system uses digital scales, electronic measuring boards, touch screen displays and bar code scanners to record data on deck and archive the data on the ship's computer network.

Sampled fish were assigned individual identification numbers, measured, weighed to the nearest 0.1 kilogram (kg), and further sampled for age and growth and feeding ecology studies. Bony fish were measured to the nearest centimeter (cm) to the end of the central caudal ray; biological samples were collected concurrently with measuring operations. Sharks and skates were measured to the end of the caudal fin (total length). Disk width was measured for rays. Lobsters were measured in millimeters (mm) from the posterior edge of the eye socket to the end of the carapace; the presence or absence of a V-notch was also noted. Crabs were measured across the carapace width (cm). Shell height was measured in (cm) for selected bivalves. Additional collections were obtained for various scientists (see Table 2). The remainder of the catch (miscellaneous invertebrates, shells, substrate, et cetera) was described by volume.

Surface temperatures were measured using the hull-mounted temperature sensor at a depth of three meters. Temperature and conductivity profiles were made using a conductivity, temperature, depth (CTD) system at every station. A bottom salinity sample was obtained twice each day to calibrate the CTD. Water samples were also taken for fluorometer calibrations.

Samples of fish eggs and larvae were collected at selected stations. Plankton sampling gear consisted of a 61 cm bongo frame fitted with 0.333 mm mesh nets. Digital flowmeters were suspended within the mouths of the bongo frame. The net was towed at 2.8-3.8 kilometers/hour (1.5-2.0 knots).

Throughout the cruise, eastern daylight time was maintained.

## RESULTS

There were 340 stations occupied during the survey with 90, 116, 74, and 60 stations completed on parts I-IV, respectively. Plankton tows were made at 117 stations. Bottom temperatures were collected at all 340 stations using the CTD system. Bottom water samples for CTD calibration were taken on 41 stations. Fish data was simultaneously recorded on traditional paper logs and electronically using the FSCS data collection system. A total of 23 comparison tows were made with the FRV DELAWARE II, and 9 with the Jason & Danielle.

Tables 1 and 2 list the major samples collected for various studies.

## DISPOSITION OF SAMPLES AND DATA

Age and growth samples, feeding ecology data and samples, maturity data, trawl catch data and hydrographic data will be analyzed at the NEFSC Woods Hole, Massachusetts, Laboratory. The various collections were forwarded to the individuals listed in Table 2. Resulting data will be audited, and entered into the NEFSC trawl survey database.

## SCIENTIFIC PERSONNEL

National Marine Fisheries Service, NEFSC, Woods Hole, MA

John Galbraith, Chief Scientist, Parts I, III

Victor Nordahl, Chief Scientist, II

Linda Despres, Chief Scientist, IV

Larry Brady, II, IV

Elisabeth Broughton, II

John Burnett, III

Larry Jacobson, III

Charles Keith, IV

Paul Kostovick, I

William Kramer, II

Barbara Lewis, III

Kathy Mays, IV

Table 1. Field observations and samples collected for feeding ecology, and age and growth studies on FRV ALBATROSS IV, Cruise 01-10, Autumn Bottom Trawl Survey, during 4 September-23 October 2001.

Species	<u>Feeding Ecology</u> Observations	<u>Age and Growth</u> Samples
Acadian redfish	302	608
American plaice	209	444
American shad	9	-
Atlantic cod	177	298
Atlantic croaker	-	434
Atlantic halibut	6	6
Atlantic herring	132	350
Atlantic mackerel	51	95
Atlantic wolffish	2	1
Barndoor skate	3	-
Black sea bass	82	144
Blackbelly rosefish	53	1
Bluefish	137	244
Butterfish	239	617
Clearnose skate	1	-
Cunner	14	1
Cusk	17	19
Fawn cusk-eel	18	-
Fourspot flounder	194	199
Goosefish	152	148

Table 1. (continued).

Species	<u>Feeding Ecology</u> Observations	<u>Age and Growth</u> Samples
Haddock	306	722
Little skate	205	-
Longfin hake	-	1
Longhorn sculpin	145	2
Ocean pout	48	54
Offshore hake	33	58
Pollock	138	222
Red hake	362	838
Rosette skate	14	-
Scup	142	359
Sea raven	101	1
Silver hake	506	1523
Smooth dogfish	198	-
Smooth skate	44	-
Spiny dogfish	466	-
Spot	24	1
Spotted hake	242	249
Summer flounder	246	420
Tautog	2	-
Thorny skate	43	-
Weakfish	129	622
White hake	215	377
Windowpane	149	308
Winter flounder	235	556
Winter skate	176	-
Witch flounder	130	255
Yellowtail flounder	137	331
<b>TOTALS</b>	<b>6,234</b>	<b>10,468</b>

Table 2. Miscellaneous scientific collections made on FRV ALBATROSS IV, Cruise 01-10, Autumn Bottom Trawl Survey, during 4 September-23 October 2001.

Investigation & Affiliation	Samples Saved	Approximate Number
Aquarium, NMFS, NEFSC, Woods Hole, MA	Atl. herring	9 bags
Edward Baker, School of Marine Science, UMASS, Dartmouth, MA	Live Atl. wolffish	4 indiv.
William Bemis, UMASS Amherst, MA	Misc. species	50 indiv.
Jon Brodziak, NMFS, NEFSC, Woods Hole, MA	<i>Loligo</i>	14 indiv.
John Burnett, NMFS, NEFSC, Woods Hole, MA	Misc. species for maturity workshop	130 indiv.
Peter Clark, Rutgers Univ., Tuckerton, NJ	Goosefish	17 indiv.
Bruce Collette, NMFS, Nat'l Systematics Lab, Washington, DC	Misc. species	10 indiv.
Kevin Friedland, CMER, UMASS, Amherst, MA	Atl. sturgeon	1 indiv.
Michael Frisk, Chesapeake Biological Lab, Solomons, MD	Various skates	1142 indiv.
John Galbraith, NMFS, NEFSC, Woods Hole, MA	Misc. species	98 indiv.
Dvora Hart, NMFS, NEFSC, Woods Hole, MA	<i>Astropecten</i> sp.	1 sample
Josef Idoine, NMFS, NEFSC, Woods Hole, MA	Shrimp	44 samples
Francis Juanes, UMASS, Amherst, MA	Silver hake and Offshore hake	90 vials

Investigation & Affiliation	Samples Saved	Approximate Number
Kenneth Kessenich, Univ. School Milwaukee, Milwaukee, WI	Butterfish & various other sp.	10 indiv.
Nancy Kohler, NMFS, NEFSC, Narragansett, RI	Tagged sharks	9 indiv.
Paul Nitschke, NMFS, NEFSC, Woods Hole, MA	Cunner	75 indiv.
Loretta O'Brien, NMFS, NEFSC, Woods Hole, MA	Atlantic cod	208 samples
Eric Parent, Fisheries & Oceans, Canada	Atlantic mackerel	10 indiv.
Rodney Rountree, UMASS, Amherst, MA	Striped & fawn cusk-eel	7 indiv.
Cheryl Ryder, NMFS, NEFSC, Woods Hole, MA	Tagged turtle	1 indiv.
Daniel Salerno, NMFS, NEFSC, Woods Hole, MA	Misc. species	76 indiv.
Jean-Marie Sevigny, MLI Mont-joli, Quebec, Canada	Redfish	12 boxes
Katherine Sosebee, NMFS, NEFSC, Woods Hole, MA	Spiny dogfish pup lengths/weights	758 indiv.
	Various skates	1072 indiv.
	Various rays	79 indiv.
Michael Vecchione, Nat'l Systematics Lab, Washington, DC	Octopus	1 indiv.
Earl Weidner, MBL, Woods Hole, MA	Goosefish	17 indiv.
Charles Wenner, South Carolina DNR, Charleston, SC	Croaker	3 indiv.
	Weakfish	3 indiv.

Investigation & Affiliation	Samples Saved	Approximate Number
Susan Wigley, NMFS, NEFSC, Woods Hole, MA	Witch flounder	4 indiv.
John Ziskowski, NMFS, NEFSC, Milford, MA	American plaice	62 indiv.
