Woods Hole Science Institutions Offer Undergraduate Summer Program on Cape Cod

Partnership Education Program (PEP), a consortium of six science institutions in Woods Hole, Mass., is seeking applicants for a ten-week summer program that combines undergraduate course work with research in marine and environmental science. Launched in 2009, PEP is an ongoing diversity program designed to recruit talent from minority groups that are under-represented in marine and environmental sciences.

PEP is designed for college students, with priority given to entering juniors and seniors, majoring in the natural sciences (biology, chemistry, physics and mathematics, or geosciences and earth system sciences) who have had some course work in oceanography, biology, or marine and/or environmental science.

The PEP course is offered for credit through University of Maryland Eastern Shore and is taught in Woods Hole by research scientists from Woods Hole science institutions. The 2010 course, entitled "Ocean and Environmental Sciences: Global Climate Change," runs from June 1 to July 2. PEP students will also conduct research projects through August 13 that employ some of the techniques and explore some of the issues presented in the course. At the end of the summer, the students will present results from their research in a 20-minute public presentation during a one-day PEP seminar.

The 2010 program will cover the cost of tuition, travel, room and board, and provide a stipend. Students who apply by February 28 will have priority for admissions and full financial support. Application information and a report on the 2009 program are available on the Woods Hole PEP website (<http://www.woodsholediversity.org/pep/>).

PEP welcomes applications from students of all backgrounds. Students from groups under-represented in marine and environmental sciences are especially encouraged to apply – this includes African American, Hispanic, Native American, Asian Pacific Island, and Alaska Native students.

PEP is a project of the Woods Hole Diversity Initiative. Participating institutions are: NOAA's National Marine Fisheries Service, Sea Education Association, Woods Hole Oceanographic Institution, U. S. Geological Survey, Marine Biological Laboratory, and Woods Hole Research Center. The Woods Hole Diversity Initiative's primary academic partner is the University of Maryland Eastern Shore.

For further information, contact PEP Director Dr. Ambrose Jearld, Jr. at NOAA Fisheries Service (Ambrose.Jearld@noaa.gov or 508-495-2318) or Dr. Paulinus Chigbu at the University of Maryland Eastern Shore (pchigbu@umes.edu or 410-621-3034).
