

LARVAL AND JUVENILE HAKES (Phycis-Urophycis sp.) EXAMINED DURING  
A STUDY OF THE WHITE HAKE, Urophycis tenuis (Mitchill), IN THE  
GEORGES BANK-GULF OF MAINE AREA.

Sandy Hook Laboratory Report No. 87-03

This report documents material examined during the course of a study of the first year life history stages of the white hake, Urophycis tenuis, in the Georges Bank-Gulf of Maine area (Fahay et al. in prep.). Published biological studies of hake species in the western North Atlantic are often questioned because of the possibility of misidentification of the various species, which resemble each other strongly in all ontogenetic stages. Characters used during the cited study are presented in Table 1. Capture data, lengths and meristic characters for all material examined are listed in Tables 2 through 10. Material examined is presently lodged at the Sandy Hook Laboratory (NMFS, NEFC) or at the Marine Field Station, Rutgers University, Tuckerton, New Jersey.

Table 1. Summary of meristic characters useful for the identification of four species of western North Atlantic hakes. Modal counts in parentheses.

<u>SPECIES</u>	<u>EPIBRANCHIAL</u>	<u>TOTAL CAUDAL</u>	<u>VERTEBRAE</u>	
	<u>GILL RAKERS</u>	<u>FIN RAYS</u>	<u>PRECAUDAL</u>	<u>CAUDAL</u>
<u>Phycis chesteri</u>	4-5	28-35	14-15	34-36
<u>Urophycis regia</u>	3	30-32	13-15 (14+33)	31-35
<u>Urophycis chuss</u>	3	28-34	14-15 (15+34)	32-36
<u>Urophycis tenuis</u>	2	33-39	15-16 (16+34)	33-35
<u>SOURCE</u>	Musick 1973.	Methven 1985; Fahay and Markle 1984; Wenner 1983.	Methven 1985; Fahay 1983; Musick 1973.	

Table 2. Summary of egg and larval (bongo net) collections in Gulf of Maine (GOM) and Georges Bank (GB), Jan. 1984-Jan. 1986. Middle- and late-stage egg identifications to genus only. Asterisk (\*) = Urophycis chuss or U. regia (not U. tenuis). Double asterisk (\*\*) = material not yet analyzed.
